

EYE3DATA IN-CAR POLICE VIDEO SYSTEM

Introducing AV-360

Eye3data a leading provider of digital surveillance system announces integration of a 5-Camera Rear View Mirror System with its Mobile DVR Solution.

The AV-360 is a digital camera system that provides both real-time monitoring and extended recording capabilities, making it a complete documentation solution for law enforcement, counter-terrorism and other commercial security related applications. The AV-360 is discrete, easy to install, more versatile and cost-effective than the usual one-directional, single lens systems. It provides customers with a complete 360 degree view of its surroundings, making it an ideal solution for reconnaissance applications.

Each AV-360 camera system comes with 5 camera lenses, including one 8x Zoom lens. It also has a connection for one external camera which can be installed to view the back-seat of a police cruiser.

Overt Model

AV-360 Models

The AV-360 camera system is available in an OVERT, COVERT or CUBE model. The OVERT version includes a microphone, optional forward facing customizable zoom camera which can be activated with a switch. The COVERT model is similar, but less conspicuous and more energy efficient, providing real-time monitoring for at least 10 hours in a parked vehicle with the engine off. The CUBE model is a one-inch square box that can be mounted on any rearview mirror or in fixed applications as inexpensive solution integrated with our Mobile DVR for schools, transit buses, hospitals, nursing homes and public facilities.

Benefits of AV-360

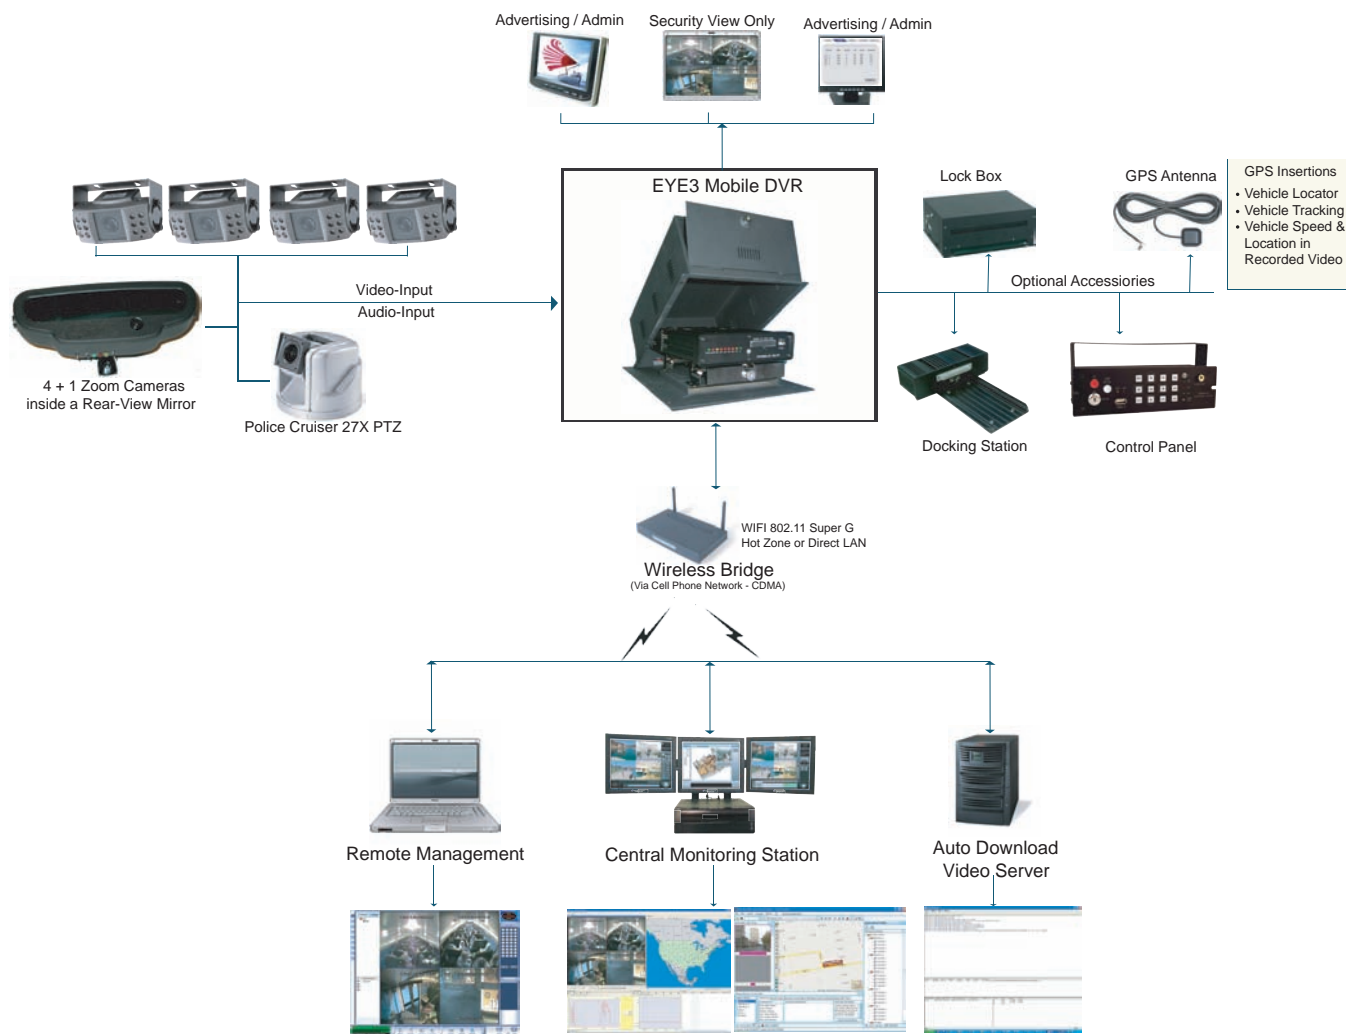

- Supports and protects officers on Patrol by providing a continuous 360-degree view both within and outside the vehicle
- Promotes public safety by discouraging criminal conduct
- Aids investigations by providing instant access to recorded data (wireless access of recorded data is also available via cellular networks)
- Facilitates prosecution as a silent witness providing unbiased, irrefutable evidence
- Pays for itself by avoiding costly lawsuits, reducing insurance costs and improving departmental productivity
- Cost-effective investigative and counter-terrorism tool
- Improves police accountability and reduces citizen complaints by encouraging proper police conduct

Applications

Integration of AV-360 with EYE3-Mobile

All AV-360 models have been integrated with our state-of-the-art EYE3-Mobile digital recording system, a Control Panel w/LCD and full wireless audio recording capabilities, providing law-enforcement with the most complete In-Car Police Video Management System.

Please refer to the EYE3-Mobile brochure for more information on the capabilities of this digital recording system.

Wireless Integration

Eye3data has partnered with leading Cellular providers to enable police officers and special investigative groups to monitor video from their AV-360 and other cameras remotely, via cellular networks. This wireless capability makes the AV-360 integration with EYE3-Mobile, the most advanced solution for Law Enforcement, Transit buses, Schools, Distribution and Delivery trucks, etc.
