

The **Smart Antenna**, from Reltima, is a highly accurate and innovative tracking device. The unit's one-piece, molded construction virtually eliminates tampering. There are no harness or antenna connections that can be easily unscrewed. The device - approximately the **size of a credit card** - can be easily installed and hidden under the dash. The unit simply requires a power, ground and engine switched power connection to complete the install. The Smart Antenna is easily affixed to the underside of the dash by simply cleaning the area of dust and debris, exposing the 3M VHB (very high bond) tape provided and applying pressure to the unit in the selected area. Installation could not be easier. No drilling, snaking multiple wires, tedious headliner removal or straps/screws are required.

DRIVER DISPATCH from RELTIMA

Route your vehicles and communicate with your drivers using the most user friendly GPS based route management and communications system available today - at a price you can afford...

Route your vehicles and communicate with your drivers using the most user friendly GPS based route management and communications system available today - at a price you can afford... In conjunction with Garmin, the industry leader in turn-by-turn navigation systems, Reltima proudly offers the **Driver Dispatch Fleet Management System**. Cost effective and driver friendly, this system was designed to provide companies with cutting edge tools for tracking, routing, dispatching and messaging. Reliable real-time wireless connectivity combined with voice aided guidance make this the perfect tool for drivers, dispatchers and customer service.

RELTIMA DuraTrac

- The DuraTrac enclosure measures 6.75" L x 3.5" W x 1.5" H

Reltima is proud to announce the release of the **DuraTrac** heavy equipment tracking device. Housed in a ruggedized, weatherproof enclosure the **SmartAntenna** is now outfitted for optimum functionality in harsh environments.

DuraTrac, the latest incarnation of the **Reltima SmartAntenna**. The construction and equipment rental industries have long been concerned with protecting their heavy equipment from theft.

DuraTrac's ability to measure engine use by hours is critical to effective equipment service planning - thereby increasing the operational life of the myriad of equipment pieces used in these industries today.

TRAILER TRACKER

Reltima Announces the Release of the Teluware Trailer Tracking System

Reltima is proud to announce the release of our new **Trailer Tracking system**. A satellite based tracking solution for customers who have trailers and need a ruggedized, long term, battery powered device. This system will display both conventionally tracked vehicles (2 minute updates) with trailer tracking (1 - 4 updates per day) in the same application. This virtually eliminates the need to use 2 separate systems to handle these tasks. Trailer tracking sales can be a great supplement to your existing efforts. There are over 5 million trailers on the road today with recent market studies showing that 80% of this market reports no ability to track their trailers.
