

SUN SURVEILLANCE

Sun Surveillance is leading the way with SolsticeCam, our line of wireless solar powered security cameras for CCTV outdoor remote video monitoring. With recent advances in wireless technology, Solsticecam is the ultimate solution for placing reliable, affordable and robust surveillance where you need it.

[LIVE DEMO OF THE SOLSTICE PTZ CAM OVER THE INTERNET 24 X 7](#)

CLICK ON THIS HYPERLINK>>> <http://www.sunsurveillance.com/demo.html>

Click on "SolsticeCam PTZ Live Demo"

Up will pop a blue screen and click on the enter button. It will prompt your computer to allow install of "active X viewer"

Your pop up blocker may block so click on that to allow. After the Active X viewer loads up the live image of the camera at the Sun Surveillance plant will appear.

First click on the preset for the "Water Tower" to bring it up and into view.

Click on the "control" button and wait for the box to come up. This is the control for the camera.

USE TELE TO ZOOM IN CLOSE
USE WIDE TO ZOOM OUT WIDE

Preset position:

TRY THE DIFFERENT ARROWS TO GET AN IDEA ONF THE RANGE OF THE CAMERA TO ROTATE 340 DEGREES YOU WILL SEE THE POLE AT ONE POINT WHILE ROTATING

THESE WERE DONE AT NIGHT BE SURE TO COME BACK AND DO SOME VIEWING IN THE DAY AS WELL

CHECK OUT SOME OF THE OTHER PRESET POSITIONS

TO TAKE A PHOTO CLICK ON THE

THIS WOULD BE THE "NAKED EYE" VIEW AT ZERO ZOOM LEVEL IE: "WIDE OPEN" VIEW - NO ZOOM

First, play with the left and right arrows to see the 340 + rotation of the camera.

Try a zoom on the far away Water Tower across the street. Adjust the up and down to look at the top on the water tower. Now the zoom should bring you so close as to be able to see a man size object, if there was one, on the tower. No human eye can even come close to this. You would need a good telescope to get this up close and personal.

Such is the power of the Sun Surveillance Solstice Camera. Your own personal telescope that rotates 340 (P = Pan) and tilts (T = Tilt) and zooms (Z = Zoom) AKA: "PTZ".

All of this over an IP connection live day and night, 24 X 7.

Most clients will have a set of assets they wish to "keep an eye on" this is where the pre programmed set points come into play. After you have all your set points and zoom levels, set the camera is set in "surveillance" mode, it will go "round robin" to each asset and zoom to the prescribed level hold for a determined time and then onto the next asset/object. With all of the captured video being recorded on a Digital Video recorder.

No Wires - No Power - No Hassle "Plant and Play" the Sun Surveillance Way!

Have a look at the "Mobotix" Camera for a peek at what it can do.

You will notice you get live AUDIO with this camera.

It is a fixed camera so no ability to "PAN" around the 340 degrees like the Sony PTZ Camera

But notice you do have a 4X ZOOM on the Mobotix Camera.
