

TRAILER TRACKER

*Reltima Announces the Release of
The Teluware Trailer Tracking System*

Reltima is proud to announce the release of our new Trailer Tracking system. A satellite based tracking solution for customers who have trailers and need a ruggedized, long term, battery powered device. This system will display both conventionally tracked vehicles (2 minute updates) with trailer tracking (1 - 4 updates per day) in the same application. This virtually eliminates the need to use 2 separate systems to handle these tasks. Trailer tracking sales can be a great supplement to your existing efforts. There are over 5 million trailers on the road today with recent market studies showing that 80% of this market reports no ability to track their trailers.

GPS TRAILER TRACKING

Overview

Features & Benefits

How much revenue is lost to stolen, vandalized, or under utilized trailers each year?

Our Trailer Location Unit products and services allow for real-time control, historical viewing of status and alarm data, including protection, utilization, automated reports, boundary crossing, and most importantly real time location. This information is viewed through the GPS North America web site, using any standard web browser, which makes access to the system convenient and easy. Our technology allows for data retrieval nearly anywhere in the world, including travel for business or on vacation.

Our patent-pending products consist of data compression algorithms, which allow for the transmission of location, speed, direction of travel, or other data, within a single packet. This helps GPS North America to provide important valuable information for a one of a kind leading service.

- Refrigerated Trailer Tracking
- Temperature Reporting

First and foremost, the Trailer Location Unit gives you the control to locate and ensure any trailer in your fleet throughout North America. It is this precise focus that will enable you to minimize the costs associated with lost, stolen, or abandoned trailers.

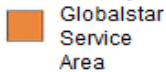

The GPS Trailer Location Unit is a highly integrated, all-in-one asset tracking device including:

- GPS receiver
- Satellite transmitter
- Internal long life (5 year) battery
- Antennas packaged in a rugged enclosure.
